

**Chapter 29 Light Waves**  
**Diffraction and Interference—continued**

2. Look at the construction of overlapping circles on your classmates' papers. Some will have more nodal lines than others, due to different starting points. How does the number of nodal lines in a pattern relate to the distance between centers of circles (or sources of waves)?

3. Figure 29.18 from your textbook is repeated below. Carefully count the number of wavelengths (same as the number of wave crests) along the following paths between the slits and the screen.

- a. Number of wavelengths between slit A and point a is \_\_\_\_\_  
 b. Number of wavelengths between slit B and point a is \_\_\_\_\_  
 c. Number of wavelengths between slit A and point b is \_\_\_\_\_  
 d. Number of wavelengths between slit B and point b is \_\_\_\_\_  
 e. Number of wavelengths between slit A and point c is \_\_\_\_\_  
 f. Number of wave crests between slit B and point c is \_\_\_\_\_

4. When the number of wavelengths along each path is the same or differs by one or more whole wavelengths, interference is \_\_\_\_\_  
 [constructive] [destructive]

and when the number of wavelengths differ by a half wavelength (or odd multiples of a half wavelength), interference is \_\_\_\_\_

[constructive] [destructive].

It's nice how knowing some physics really changes the way we see things!

*A Cultural History of Physics* Károly Simonyi, 2025-02-28 While the physical sciences are a continuously evolving source of technology and of understanding about our world they have become so specialized and rely on so much prerequisite knowledge that for many people today the divide between the sciences and the humanities seems even greater than it was when C P Snow delivered his famous 1959 lecture The Two Cultures In A Cultural History of Physics Hungarian scientist and educator Károly Simonyi succeeds in bridging this chasm by describing the experimental methods and theoretical interpretations that created scientific knowledge from ancient times to the present day within the cultural environment in which it was formed Unlike any other work of its kind Simonyi's seminal opus explores the interplay of science and the humanities to convey the wonder and excitement of scientific development throughout the ages These pages contain an abundance of excerpts from original resources a wide array of clear and straightforward explanations and an astonishing wealth of insight revealing the historical progress of science and inviting readers into a dialogue with the great scientific minds that shaped our current understanding of physics Beautifully illustrated accurate in its scientific content and broad in its historical and cultural perspective this book will be a valuable reference for scholars and an inspiration to aspiring scientists and humanists who believe that science is an integral part of our culture
