The Concept of Nature in Classical German Philosophy Luis Fellipe Garcia, 2024-12-02 Classical German Philosophy has traditionally been understood as the period in the history of ideas in which the investigation of the human mind takes precedence over the investigation of the natural world This assessment has a twofold consequence On the one hand the philosophy of the period has been praised for its contributions to our understanding of multiple expressions of human rationality such as history art and religion On the other hand such a philosophy has been criticized for its obscure speculations alien to the standards of modern scientific cognition The philosophy of nature developed at the time has been

accordingly dismissed as a piece of outdated metaphysics Challenging this view the contributions collected in this book argue for the historical and contemporary relevance of the approaches to nature formulated at the time **Concepts of Space** Embodiment, Political Economy and Human Flourishing Frédéric Basso, Carsten Herrmann-Pillath, 2024-05-11 This book presents embodied economics as a foundational alternative to behavioral economics and other projects integrating economics and psychology inspired by the computational paradigm The 20th century witnessed the disembodiment of economic models through the intensification of mathematization and formal abstraction in economics Even proponents of an embodied approach to cognition such as Hayek paradoxically championed the abstract market order as a disembodied superhuman intelligence In the wake of groundbreaking perspectives in cognitive and social sciences which have helped to rethink the fundamental building blocks of economics agency and institutions this title takes a radical turn towards embodiment Reinstating economics as political economy embodied economics motivates a critique of capitalism based on the analysis of disembodiment through abstraction and reactivates key critical insights into the anthropology put forward by the young Marx about contemporary economics and its conceptualizations of money property and labor Based on this analysis the authors envision a concrete utopia for an economic order centered on human dignity and care for life on Earth This book contributes to recent discussions about behavioral experimental and neuroeconomics and addresses a transdisciplinary audience in the social and behavioral sciences philosophy and the humanities Learning and Instruction Marcia C. Linn, Bat-Sheva Eylon, 2011-05-20 Science Learning and Instruction describes advances in understanding the nature of science learning and their implications for the design of science instruction. The authors show how design patterns design principles and professional development opportunities coalesce to create and sustain effective instruction in each primary scientific domain earth science life science and physical science Calling for more in depth and less fleeting coverage of science topics in order to accomplish knowledge integration the book highlights the importance of designing the instructional materials the examples that are introduced in each scientific domain and the professional development that accompanies these materials It argues that unless all these efforts are made simultaneously educators cannot hope to improve science learning outcomes The book also addresses how many policies including curriculum standards guidelines and standardized tests work against the goal of integrative understanding and discusses opportunities to rethink science education policies based on research findings from instruction that emphasizes such understanding
