

Conic Sections Project

- This is meant to be a first investigation into the world of conic sections.
- I have students do this project before we begin our conic sections unit, but after they have done a lot of work with functions and their key features and properties.
- After this project, we continue on with a unit on Conic Sections that teaches the following Common Core standards:
 - Derive the equation of a circle of given center and radius using the Pythagorean Theorem; complete the square to find the center and radius of a circle given by an equation.
 - Derive the equation of a parabola given a focus and directrix.
- Although the Common Core took out most of the conic section standards, I still do this project because I feel it is a good investigation and it connects the students prior knowledge. It also hits many practice standards, such as:
 - Reason abstractly and quantitatively.
 - Construct viable arguments and critique the reasoning of others.
 - Look for and make use of structure
 - Persevere in Solving Problems.
 - Use tools strategically

Algebra 2, 2001 **Math for Everyone** Nathaniel Max Rock, 2007 Tired of ten pound math textbooks Tired of math textbooks with 700 to 1 000 pages Tired of massive student failure in gatekeeper math courses like Algebra I Tired of math phobic students and their parents exclaiming I hate math Maybe it is time to try a different curriculum Math For Everyone is a curriculum designed to promote massive student and teacher math success Each year's content in the six math courses 7th Grade Math Algebra I Geometry I Algebra II Math Analysis and Calculus is boiled down into its essential vocabulary and 5 7 key concepts with particular attention paid to clarity and articulation between courses Assessment includes old favorites as well as authentic assessment with rubrics and grading advice included No text is longer than 80 pages as the 5 7 key concepts can be amply demonstrated and practiced in this amount of space Math For Everyone is not only great for new math teachers and struggling math students but great for everyone Nathaniel Max Rock is an educator since 2001 and the author of more than a dozen education books He has taught the following courses 7th Grade Math Algebra I Geometry I Algebra II Math Analysis Calculus as well as California High School Exit Exam CAHSEE Prep Classes AVID Elective 9th 10th grade and Carnegie Computer classes Max's authoring topics include math education and religion **Math for Everyone Combo Book** Nathaniel Max Rock, 2007-07 Each year's content in six math courses is boiled down into its essential vocabulary and five to seven key concepts with particular attention paid to clarity and articulation between courses

Education Teaching Teaching Mathematics Through Cross-Curricular Projects Elizabeth A. Donovan, Lucas A. Hoots, Lesley W. Wigglesworth, 2024-07-22 This book offers engaging cross curricular modules to supplement a variety of pure mathematics courses Developed and tested by college instructors each activity or project can be integrated into an instructor's existing class to illuminate the relationship between pure mathematics and other subjects Every chapter was carefully designed to promote active learning strategies The editors have diligently curated a volume of twenty six independent modules that cover topics from fields as diverse as cultural studies the arts civic engagement STEM topics and sports and games An easy to use reference table makes it straightforward to find the right project for your class Each module contains a detailed description of a cross curricular activity as well as a list of the recommended prerequisites for the participating students The reader will also find suggestions for extensions to the provided activities as well as advice and reflections from instructors who field tested the modules Teaching Mathematics Through Cross Curricular Projects is aimed at anyone wishing to demonstrate the utility of pure mathematics across a wide selection of real world scenarios and academic disciplines Even the most experienced instructor will find something new and surprising to enhance their pure mathematics courses

3D Game Engine Design David Eberly, 2006-11-03 The first edition of 3D Game Engine Design was an international bestseller that sold over 17 000 copies and became an industry standard In the six years since that book was published graphics hardware has evolved enormously Hardware can now be directly controlled through techniques such as

shader programming which requires an entirely new thought process of a programmer In a way that no other book can do this new edition shows step by step how to make a shader based graphics engine and how to tame this new technology Much new material has been added including more than twice the coverage of the essential techniques of scene graph management as well as new methods for managing memory usage in the new generation of game consoles and portable game players There are expanded discussions of collision detection collision avoidance and physics all challenging subjects for developers The mathematics coverage is now focused towards the end of the book to separate it from the general discussion As with the first edition one of the most valuable features of this book is the inclusion of Wild Magic a commercial quality game engine in source code that illustrates how to build a real time rendering system from the lowest level details all the way to a working game Wild Magic Version 4 consists of over 300 000 lines of code that allows the results of programming experiments to be seen immediately This new version of the engine is fully shader based runs on Windows XP Mac OS X and Linux and is only available with the purchase of the book

Knorr, 2012-12-06 The present work has three principal objectives 1 to fix the

chronology of the development of the pre Euclidean theory of incommensurable magnitudes beginning from the first discoveries by fifth century Pythagoreans advancing through the achievements of Theodorus of Cyrene Theaetetus Archytas and Eudoxus and culminating in the formal theory of Elements X 2 to correlate the stages of this developing theory with the evolution of the Elements as a whole and 3 to establish that the high standards of rigor characteristic of this evolution were intrinsic to the mathematicians work In this third point we wish to counterbalance a prevalent thesis that the impulse toward mathematical rigor was purely a response to the dialecticians critique of foundations on the contrary we shall see that not until Eudoxus does there appear work which may be described as purely foundational in its intent Through the examination of these problems the present work will either alter or set in a new light virtually every standard thesis about the fourth century Greek geometry I THE PRE EUCLIDEAN THEORY OF INCOMMENSURABLE MAGNITUDES The Euclidean theory of incommensurable magnitudes as preserved in Book X of the Elements is a synthetic masterwork Yet there are detectable seams in its structure seams revealed both through terminology and through the historical clues provided by the neo Platonist commentator Proclus
