How To Construct Your Intellectual Pedigree: A History Of Mentoring In Science Elof Axel

Carlson,2020-08-27 This is a handbook that shows the reader how to construct an intellectual pedigree It is also a history of science monograph because the completed intellectual pedigrees can be used individually or collectively to trace the influences of mentoring in the life sciences The author uses Hermann Joseph Muller 1890 1967 which includes his own intellectual pedigree to show how knowledge was shifted from Italy to Germany and England to France and then to the American Colonies Through Muller the author goes in two directions one leading to Huxley Darwin and Newton The second leads to Agassiz Malpighi Borelli and Galileo The author also shows from comparing 60 additional intellectual pedigrees that

about one third go to Newton one third to Galileo and the rest to other icons of the past e g Linnaeus Lavoisier Gay Loussac Leibniz It shows how small was the pool of available scientists in the universities before the mid 19th century This book will stimulate graduate students and faculty to construct their own intellectual pedigrees It will also be of interest to historians and philosophers of science The book discusses the role of mentoring dividing this into inputs of intellectual development as well as outputs of development using timelines arranged as circles For each mentor a brief account is given of that person s work and relation to the subject of the pedigree

Darwin and the Making of Sexual Selection Evelleen Richards,2017-04-27 Darwin s concept of natural selection has been exhaustively studied but his secondary evolutionary principle of sexual selection remains largely unexplored and misunderstood Yet sexual selection was of great strategic importance to Darwin because it explained things that natural selection could not and offered a naturalistic as opposed to divine account of beauty

and its perception Only now with Darwin and the Making of Sexual Selection do we have a comprehensive and meticulously researched account of Darwin's path to its formulation one that shows the man rather than the myth and examines both the social and intellectual roots of Darwin's theory Drawing on the minutiae of his unpublished notes annotations in his personal library and his extensive correspondence Evelleen Richards offers a richly detailed multilayered history Her fine grained analysis comprehends the extraordinarily wide range of Darwin's sources and disentangles the complexity of theory practice and analogy that went into the making of sexual selection Richards deftly explores the narrative strands of this history and vividly brings to life the chief characters involved A true milestone in the history of science Darwin and the Making of Sexual Selection illuminates the social and cultural contingencies of the shaping of an important if controversial biological concept that is back in play in current evolutionary theory

The Diagrammatics of 'Race' Marianne Sommer, 2024-07-30 This is the first book that engages with the history of diagrams in physical evolutionary and genetic anthropology Since their establishment as scientific tools for classification in the eighteenth century diagrams have been used to determine but also to deny kinship between human groups In nineteenth century craniometry they were omnipresent in attempts to standardize measurements on skulls for hierarchical categorization In particular the human family tree was central for evolutionary understandings of human diversity being used on both sides of debates about whether humans constitute different species well into the twentieth century With recent advances in ancient DNA analyses the tree diagram has become more contested than ever does human relatedness take the shape of a network Are human individual genomes mosaics made up of different ancestries Sommer examines the epistemic and political role of these visual representations in the history of race as an anthropological category How do such diagrams relate to imperial and post colonial practices and ideologies but also to liberal and humanist concerns The Diagrammatics of Race concentrates on Western projects from the late 1700s into the present to diagrammatically define humanity subdividing and ordering it including the concomitant endeavors to acquire representative samples bones blood or DNA from all over the world Contributing to the diagrammatic turn in the humanities and social sciences it reveals connections between diagrams in anthropology and other visual traditions including in religion linguistics biology genealogy breeding and eugenics
