

Speedometer

This speedometer shows indicated vehicle speed in miles per hour and kilometers per hour.

Odometer

The amount of figures in the speedometer face, which indicate the accumulated mileage in miles.

Temperature Indicator

Proper oil level, particularly before starting the vehicle, is important to proper operation. For your protection the indicator on the vehicle is designed with temperature indicator features to indicate temperature. It is built into the speedometer face to indicate the engine temperature. The indicator shows the oil level.

When a new indicator is installed and turned on, it will be set to the same mileage indicated on the prior indicator. The new indicator will be set to the same mileage indicated on the prior indicator. The replacement indicator must be set to the same mileage as the prior indicator. To determine the actual vehicle mileage, add the mileage shown on the face to the current odometer reading. If the replacement indicator can be set up to the same mileage as the prior indicator, no other frame label is needed.

Trip Odometer

This optional trip odometer may be used to store by turning down to the right. This instrument may be used to more accurately record trip mileage in kilometers.

Fuel Gauge

This fuel gauge will register the APPROXIMATE fuel level in the tank, when the ignition is in the RUN position.

When the gauge registers EMPTY, some fuel is still available as a reserve. When the gauge registers FULL, some fuel can still be added to the tank.

The following conditions may be considered normal:

- Fuel station pumps may shut off before fuel gauge indicates FULL.
- Amount of fuel required for fill-up may not exactly correspond to gauge reading.
- Needle may not move away from FULL until some time after fill-up.
- Needle may move during turns, stops and accelerations.
- When the ignition switch is turned to the OFF position, the needle will not necessarily return all the way to the EMPTY mark.

Oil Choke Indicator Light

This light will come on to provide a "bulb check" when the ignition is turned on, but should go out after the engine is started. If light fails to come on with the ignition turned on, it could indicate a burned-out bulb, or a blown instrument lamp fuse or a defective electric choke heater circuit. Have the system repaired if light does not come on during check.
