 Oguchi,2024-12-01 This open access book gives comprehensive empirical insights on connected and automated driving CAD  
 of road transport vehicles which leads to the driver being partially or completely replaced by automation The current trend  
 towards widespread research and development of automation of motorised individual transport is driven by the expected  
 benefits such as increased road safety smoother traffic flow reduction of congestion or use of driving time for other activities  
 CAD has the potential to change several dimensions of the transport system ranging from changes in car ownership to the  
 availability of entirely new mobility services Some proponents even expect CAD to revolutionise the current transport system  
 as a whole In order to make informed statements about the possible impact of CAD on transport systems research must  
 consider a wide range of open questions In what way do the existing framework conditions of the prevailing mobility systems  
 affect the impact of CAD How does the governance style relate to regulatory changes and resource allocation in the  
 development of CAD Is an autonomous ride hailing service really a profitable business case What are the attitudes and  
 expectations towards CAD in the general public What are the effects of CAD on transport systems What are other impacts of  
 CAD that should be assessed All of these questions were addressed within different projects as part of the Japanese German  
 Research Cooperation on CAD and can be discovered by the reader of this book **Official Gazette of the United States**

 Wishart,2025-08-13 Advanced technologies that assist the human driver or reduce or even eliminate the human driver s role  
 are becoming increasingly prevalent in new light duty vehicles used by the general public These technologies are divided  
 between Active Safety features that monitor the human driver and vehicle motion and act intermittently to mitigate and avoid  
 crashes and Driving Automation features that assume some or all of the dynamic driving task from the human driver Both  
 types of technologies have the potential to reduce injuries and save lives by reducing the frequency and or severity of crashes  
 Safety Impacts of Active Safety and Driving Automation Features addresses the current capabilities and future potential for  
 Active Safety and Driving Automation features to reduce crash frequency and severity and provides an overview of the state  
 of the industry for both types of features including current deployments trends and anticipated rollouts Gaps in knowledge
