Theories of Scientific Method Robert Nola, Howard Sankey, 2014-12-18 What is it to be scientific Is there such a thing as scientific method And if so how might such methods be justified Robert Nola and Howard Sankey seek to provide answers to these fundamental questions in their exploration of the major recent theories of scientific method Although for many scientists their understanding of method is something they just pick up in the course of being trained Nola and Sankey argue that it is possible to be explicit about what this tacit understanding of method is rather than leave it as some unfathomable mystery They robustly defend the idea that there is such a thing as scientific method and show how this might be legitimated This book begins with the question of what methodology might mean and explores the notions of values rules and principles before investigating how methodologists have sought to show that our scientific methods are rational Part 2 of this book sets out some principles of inductive method and examines its alternatives including abduction IBE and hypothetico deductivism Part 3 introduces probabilistic modes of reasoning particularly Bayesianism in its various guises and shows how it is able to give an account of many of the values and rules of method Part 4 considers the ideas of philosophers who have proposed distinctive theories of method such as Popper Lakatos Kuhn and Feyerabend and Part 5 continues this theme by considering philosophers who have proposed naturalised theories of method such as Quine Laudan and Rescher This book offers readers

a comprehensive introduction to the idea of scientific method and a wide ranging discussion of how historians of science philosophers of science and scientists have grappled with the question over the last fifty years **In Search of**

Method Matters in Psychology Brian D.

Haig, 2018-09-25 This book applies a range of ideas about scientific discovery found in contemporary philosophy of science to psychology and related behavioral sciences In doing so it aims to advance our understanding of a host of important methodological ideas as they apply to those sciences A philosophy of local scientific realism is adopted in favor of traditional accounts that are thought to apply to all sciences As part of this philosophy the implications of a commitment to philosophical naturalism are spelt out and a correspondence theory of truth is defended by showing how it helps explain various features of scientific practice The central chapter of the book presents a broad theory of scientific method that comprises the detection of empirical phenomena and their subsequent understanding by constructing explanatory theories through the use of abductive methods This theory of scientific method is then used as a framework to reconstruct the well known qualitative method of grounded theory and to present a systematic perspective on clinical reasoning and case formulation Relatedly an abductive or explanationist understanding of methods is employed to evaluate the knowledge credentials of evolutionary psychology In addition the conceptual and methodological foundations of a variety of quantitative methods are examined Exploratory factor analysis and tests of statistical significance are given special attention
