The purpose of the edited volume is to provide an international lens to examine evidence based investigations in Ethno STEM research Ethno science Ethno technology Ethno engineering and Ethno mathematics These themes grew out of multi national multi institutional and multi disciplinary efforts to preserve as well as epitomize the role that Indigenous Knowledge Systems IKS play in cognitive development and its vital contributions to successful and meaningful learning in conventional and non conventional contexts Principled by the Embodied Situated and Distributed Cognition ESDC this innovative book will provide evidence supporting the embeddedness of a thinking in acting model as a fundamental framework that explains and supports students acquisition of scientific knowledge So often western science curricula are experienced as irrelevant since it does not take cognizance of the daily experiences and world in which the learner finds himself This book takes a socio cultural look at IKS and applies research in neuroscience to make a case its incorporation in the STEM Science Technology Engineering and Mathematics classroom We use the Embodied Situated Distributed Cognition ESDC Model as conceptual framework in this book Although the value of IKS is often acknowledged in curriculum policy documents teachers are most often not trained in incorporating IK in the classroom Teachers lack of the necessary pedagogical content knowledge PCK in effectively incorporating IK in their classrooms is a tremendous problem internationally Another problem is that IK is often perceived as pseudo science and scholars advocating for the incorporation of IK in the school curriculum often do not contextualize their

arguments within a convincing theoretical and conceptual framework Psychopathology Eric Yu Hai Chen, 2022-08-05

What's Wrong with Stereotyping? Erin Beeghly, 2025-02-20 What's Wrong with Stereotyping offers a refreshing and accessibly written philosophical take on the ethics of stereotyping Stereotyping is woven into every aspect of human experience conversation psychology algorithmic systems and culture It relates to generalization and induction core aspects of rationality But when and why it is morally wrong to stereotype This book tackles this deep and enduring puzzle To solve it Erin Beeghly delves into the relationship between stereotyping and another phenomenon discrimination Not only does stereotyping cause discriminatory treatment she argues stereotyping can itself be discriminatory This insight that to stereotype is to discriminate enables a novel

philosophical methodology which builds towards a theory of wrongful stereotyping by analyzing the lived experiences of marginalized groups and existing theories of wrongful discrimination Core chapters evaluate important ethical wrongs the failure to treat persons as individuals disrespect harm prejudice threats to freedoms and the failure to treat persons as equals One finds that there is no essence of wrongful stereotyping a single property or set of properties that all problematic cases share in common Nor are the wrongs of stereotyping reducible to an elegant number two or three Instead wrongful stereotyping is a messy normative kind characterized by clusters of wrong making properties including all the ones noted here and perhaps more Readers will come away with a radically pluralistic open ended theory of wrongful stereotyping that they can use to identify wrongful stereotyping in their own lives and our contemporary world Filled with thought provoking examples and models for social change this book emphasizes the messiness of moral reality and the importance of looking to the past in order to understand the ethical perils of stereotyping *Judaic Technologies of the Word* Gabriel

Levy,2014-10-14 *Judaic Technologies of the Word* argues that Judaism does not exist in an abstract space of reflection Rather it exists both in artifacts of the material world such as texts and in the bodies brains hearts and minds of individual people More than this Judaic bodies and texts both oral and written connect and feed back on one another *Judaic Technologies of the Word* examines how technologies of literacy interact with bodies and minds over time The emergence of literacy is now understood to be a decisive factor in religious history and is central to the transformations that took place in the ancient Near East in the first millennium BCE This study employs insights from the cognitive sciences to pursue a deep history of Judaism one in which the distinctions between biology and culture begin to disappear **Media in Foreign Language**

Teaching and Learning Wai Meng Chan,Kwee Nyet Chin,Masanori Nagami,Titima Suthiwan,2011-10-27 While educators and educational psychologists debate the influence of media on learning there can be little doubt that media is now an integral constituent of any educational context In particular computer and internet media with their immense processing power and multimedia capabilities can have significant bearing on learning processes and outcomes in today s learning environment Such media which are increasingly designed to be highly interactive and adaptable can enable reflective productive and communicative activities and have much potential for foreign language learning The book contains 16 papers which look at different forms of media and explore how these affect or can be used effectively in foreign language education The first of three parts focuses on important theoretical and pedagogical issues in selecting and using media In the second part insightful empirical research findings are presented on the contributions of different forms of media in language teaching and learning including their effect on learners learning motivation The third and concluding part of the book provides in depth accounts of how media can be harnessed to drive innovative curricular practice as well as students evaluations of these curricular projects **A Companion to Experimental Philosophy** Justin Sytsma,Wesley

Buckwalter,2016-03-28 This is a comprehensive collection of essays that explores cutting edge work in experimental

philosophy a radical new movement that applies quantitative and empirical methods to traditional topics of philosophical inquiry Situates the discipline within Western philosophy and then surveys the work of experimental philosophers by sub discipline Contains insights for a diverse range of fields including linguistics cognitive science anthropology economics and psychology as well as almost every area of professional philosophy today Edited by two rising scholars who take a broad and inclusive approach to the field Offers a complete introduction for non specialists and students to the central approaches findings challenges and controversies in experimental philosophy

Connected Minds Nicolas Payette, 2012-04-25 The theme for this volume is social cognition construed from a psychological and collective point of view From the psychological point of view the question is to understand how the human mind processes social information how it encodes stores and uses it in the social context From a collective point of view the question is to understand how individual cognition is influenced improved increased or impaired by social interactions for instance in communicating and collaborating with intelligent agents These two dimensions of social cognition are obviously interdependent the psychological dimension makes the collective dimension possible which can in return modify the psychological dimension The book is divided into four parts The first part is about socio cognitive skills Among those we count face recognition imitation learning embodied social interaction cheater detection and psychological concept acquisition The second part is about persons and memories stereotypes attraction judgements and impression formation are the subjects at hand The third part is about understanding each other A key part of that understanding is the motor system whether or not we see it as a mirror but community membership itself can also contribute to our understanding of others The fourth and final part is about social cognition in societies This section is unified by the common goal of understand how social cognition actually influences the structure of different societies whether whole cultures specific social networks rural communities or even groups of caterpillars

Metacognition, Metahumanities, and Medical Education Alan Bleakley, Quentin Eichbaum, Rachel Ellaway, 2024-09-30 This persuasive volume develops a novel approach to medical education and the medical humanities making a case for the integration of the two to explore the ways in which warm humanism and cold technologies can come together to design humane posthumanist futures in medicine There are many problems with conventional medical education It can be overly technocratic dehumanizing and empathy eroding introducing artefacts that lead to harm and reproduce inequality and injustice Use of the arts humanities and qualitative social sciences have been pursued as an antidote or balance to these problems Arguing against the purely instrumentalist use of medical humanities in this way this book addresses the importance of a genuine and open ended engagement with humanities approaches in medicine It discusses the impact of artificial intelligence and emerging theoretical frameworks and posthumanist perspectives such as object oriented ontology on meaning making in medicine It demonstrates how the key to such a transition is the recovery of the intrinsic art and humanity of metaphor heavy biomedical science in turn framed by models of dynamic complexity rather than static linearity This book is an important

contribution to debates around the medical humanities and its role in medical education It is an essential read for scholars with an interest in these areas as well as those working in science and technology studies and the sociology of health and illness

Future-proofing STEAME education in South Africa Rajendran Govender,Josef de Beer,Rouaan Maarman,Rajendra Chetty,2025-02-28 This book aims to contribute to the discourse of finding innovative solutions to the myriad of challenges facing science education in South Africa The book positions itself in the multi disciplinary focus on Science Technology Engineering Arts Mathematics and Entrepreneurship STEAME education rather than the traditional narrow focus on Science Technology Engineering and Mathematics STEM The chapters in the book explore the challenges and opportunities facing STEAME education in a complex 21st century and at the advent of a society with a strong artificial intelligence component in its DNA The leitmotif of the book is how engaging pedagogies could be utilised in the classroom to enhance self directed learning a sine qua non to future proof South Africa s science and technological advancement This is a book written by scholars for scholars Its target audience includes academics and researchers in the field of science education and scholars engaged with innovative teaching pedagogies particularly approaches that would enhance the achievement of learners in disadvantaged contexts The chapters in the book although eclectic in approach all contribute to the central theme of the book Most of the chapters lean on textual analyses literature reviews or concept papers which disclose new ideas before full validation

Cognition Beyond the Brain Stephen J. Cowley,Frédéric Vallée-Tourangeau,2017-03-28 This book challenges neurocentrism by advocating a systemic view of cognition based on investigating how action shapes the experience of thinking placing interactivity at its heart This systemic viewpoint makes three main claims First that many elaborate cognitive skills like language problem solving and human computer interaction HCI are based in sense saturated coordination or interactivity Second interactivity produces a tightly woven scaffold of resources some internal to the agent and others external that elevates and transforms thinking Third human agents entwine brains bodies and their surroundings as they manage multi scalar dynamics This new edition continues to demonstrate how a systemic perspective casts a productive light on thinking in applied domains such as crime scene analysis the use of information technology in construction and computer mediated trusts and presents new studies on the cognitive ecology of the web multi scalar temporal and organisational cognition and the importance of interactive material engagement in digital architecture Authors use various scales of the systemic viewpoint to illustrate how bodies and artefacts shape thinking but in all cases the experience of materiality is meshed with activity that involves the world beyond the body Cognition Beyond the Brain is a valuable reference for researchers practitioners and graduate students within the fields of Computer Science Psychology Linguistics and Cognitive Sciences

From Fingers to Digits Margaret A. Boden,Ernest A. Edmonds,2019-07-16 Essays on computer art and its relation to more traditional art by a pioneering practitioner and a philosopher of artificial intelligence In From Fingers to Digits a practicing artist and a philosopher examine computer art and how it has been both accepted and

rejected by the mainstream art world In a series of essays Margaret Boden a philosopher and expert in artificial intelligence and Ernest Edmonds a pioneering and internationally recognized computer artist grapple with key questions about the aesthetics of computer art Other modern technologies photography and film have been accepted by critics as ways of doing art Does the use of computers compromise computer art s aesthetic credentials in ways that the use of cameras does not Is writing a computer program equivalent to painting with a brush Essays by Boden identify types of computer art describe the study of creativity in AI and explore links between computer art and traditional views in philosophical aesthetics Essays by Edmonds offer a practitioner s perspective considering among other things how the experience of creating computer art compares to that of traditional art making Finally the book presents interviews in which contemporary computer artists offer a wide range of comments on the issues raised in Boden s and Edmonds s essays

Embodied and grounded cognition Anna Borghi,Diane Pecher,2012-01-01 In the last 10 15 years the embodied and grounded cognition approach has become widespread in all fields related to cognitive science such as cognitive and social psychology neuroscience philosophy anthropology computational modelling and robotics According to this approach our cognitive activity is grounded in sensory motor processes and situated in specific contexts and situations Therefore in this view concepts consist of the reactivation of the same neural pattern that is present when we perceive and or interact with the objects they refer to In the same way understanding language would imply forming a mental simulation of what is linguistically described This simulation would entail the recruitment of the same neurons that are activated when actually acting or perceiving the situation action emotion object or entity described by language In the last years a lot of evidence has been collected in favour of EC and GC view The aim of this Research Topic is twofold First it intends to give an idea of the field of embodied and grounded cognition in its broadness We therefore intend to invite scientists of different disciplines anthropology philosophy linguistics cognitive and social psychology neuroscience computer science to submit their proposals The second aim of this Research Topic is to focus on some challenges that in our opinion embodied and grounded theories of cognition need to face First we believe that one important challenge for EC and GC views is to account for the way the so called abstract concepts and abstract words are represented Evidence on the representation of concrete concepts and words is compelling whereas evidence on abstract concepts representation is still too scarce and limited to restricted domains We therefore welcome proposals dealing with this complex issue Second we think that embodied and grounded theories of cognition would need to formulate more precise hypotheses and that in general within the field a larger theoretical effort should be made It is striking that even if a lot of work in the field of computational modelling and robotics starts from an embodied approach experimental and modelling work on embodied cognition remain somehow separate We therefore invite researchers to submit papers proposing models which might help to explain phenomena as well as to constrain and specify in more detail the predictions and the claims advanced within the framework of EC and GC theories

Evolution and Popular Narrative ,2019-06-07 The contributors

to this volume share the assumption that popular narrative when viewed with an evolutionary lens offers an incisive index into human nature In theory narrative art could take a near infinity of possible forms In actual practice however particular motifs plot patterns stereotypical figures and artistic devices persistently resurface indicating specific predilections frequently at odds with our actual living conditions Our studies explore various media and genres to gauge the impact of our evolutionary inheritance in interdependence with the respective cultural environments on our aesthetic appreciation As they suggest research into mass culture is not only indispensable for evolutionary criticism but may also contribute to our understanding of prehistoric selection pressures that still influence modern preferences in popular narrative Contributions by David Andrews James Carney Mathias Clasen Brett Cooke Tam s D vid Barrett Tom Dolack Kathryn Duncan Isabel Behncke Izquierdo Joe Keener Alex C Parrish Todd K Platts Anna Rotkirch Judith P Saunders Michelle Scalise Sugiyama Dirk Vanderbeke and Sophia Wege
