

*Major prize to Richard Rhodes
for *The Making of the Atomic Bomb*.*

"a strong intellectual adventure, and a clear, fast-paced and indispensable
treat, at even as which our future depends. From Einstein describing his
intellectual development as 'intended to follow' after saying, 'world govern-
ment was only hope for survival,' the book is surprising and revealing."

—Carl Sagan

"Rhodes' *The Making of the Atomic Bomb* is the best, the richest, and the deepest
description of the development of physics in the last half of this century that I have
written, and it is certainly the most enjoyable."

—Isaac Asimov

"Mr. Rhodes has given a convincing portrait of an era and provided lucid
explanations of the science and technology behind the creation of the atomic
bomb. Moreover, he has brought a huge cast of fascinating characters to life
on the page. This long rich book is filled with suspense. It is the comprehensive
history of the bomb, and it is also a work of literature."

—Tacy Kiddier

"... what most deeply impressed me with the author's knowledge of much of the
history of the science which led to the development of nuclear energy and nuclear
bombs, and of the personalities which contributed to the U.S. to the development
of them. I was particularly impressed by his indication of the importance of the
Soviet contribution, which are almost always underestimated but which he
fully realizes and perhaps even overstates. I hope the book will find a wide
reading."

—Eugene P. Wigner,
Nobel Laureate for Physics, 1962

"Rhodes' *The Making of the Atomic Bomb* is well written, interesting and one of the
best in the scientific literature on the subject. It is fascinating as a history, and I
have learned from it many things I did not know. Mr. Rhodes has done his
homework thoroughly and intelligently."

—Enrico Fermi,
Nobel Laureate for Physics, 1938

—Ruth W. Alvarez,
Nobel Laureate for Physics, 1947

Dark Star Matthew H. Hersch, 2023-12-26 A captivating history of NASA's Space Transportation System the space shuttle chronicling the inevitable failures of a doomed design In *Dark Star* Matthew Hersch challenges the existing narrative of the most significant human space program of the last 50 years NASA's space shuttle He begins with the origins of the space shuttle a century long effort to develop a low cost reusable rocket powered airplane to militarize and commercialize space travel which Hersch explains was built the wrong way at the wrong time and for all the wrong reasons Describing the unique circumstances that led to the space shuttle's creation by President Richard Nixon's administration in 1972 and its subsequent flights from 1981 through 2011 Hersch illustrates how the space shuttle was doomed from the start While most historians have accepted the view that the space shuttle's fatal accidents including the 1986 Challenger explosion resulted from deficiencies in NASA's management culture that lulled engineers into a false confidence in the craft *Dark Star* reveals the widespread understanding that the shuttle was predestined for failure as a technology demonstrator The vehicle was intended only to give the United States the appearance of a viable human spaceflight program until funds became available to eliminate its obvious flaws Hersch's work seeks to answer the perilous questions of technological choice that confront every generation and it is a critical read for anyone interested in how we can create a better world through the things we build
