Which of these sources was the more useful, and why?

The internet was the best because it gave me some good ideas about how to do the investigation. I had to change the independent variable from type of disinfectant (in the one on the internet) to concentration of disinfectant for my experiment. The book was not so good because it only talked about killing bacteria and antibiotics and didn't give a method.

Comments on both sources with a clear explanation as to why one source was better than the other (and the basis of a method that could be developed).
